

SOCCER SHOTS PARTNER FAQs

WHAT IS SOCCER SHOTS DOING TO ENSURE MY CHILD'S SAFETY?

Soccer Shots has implemented protocols surrounding cleanliness/disinfecting, social distancing on field, and health monitoring any symptoms/temperature checks to help mitigate the risk of contracting/spreading COVID-19.

ON-FIELD PROTOCOLS

- Soccer Shots will be following requirements for face coverings per state/local regulations.
- Children will not be permitted to help set up and put away cones or any other equipment.
- You won't find high-fives, fist bumps or any other form of physical contact on Soccer Island.
- Pinnies will not be used.
- Implementation of social distancing.
- Larger field set-ups, when possible.
- Equipment will be washed and sanitized at the end of each day.

COACH HEALTH PROTOCOLS

- Coaches will be required to report and will not be able to coach if they are not feeling well or have any signs of illness.
- Coaches will be required to check their temperature before the start of their day.
- Coaches will be asked to monitor their temperature throughout the day, when possible.
- Coaches will report if they experience any known Coronavirus symptoms immediately, and will not be allowed to return to work until they are symptom-free for 14 days, in accordance with the CDC & Public Health guidance.
- Coaches will report if they have been exposed to Coronavirus, and follow the subsequent self-quarantining guidelines outlined by the CDC & Public Health guidance.

WHAT SHOULD I DO TO GET MY CHILD READY FOR SOCCER ISLAND?

1. Make sure childrens' hands are washed and/or sanitized before entering Soccer Island.
2. Monitor childrens' (and observing family members') temperatures before attending a Soccer Shots session, and follow CDC/Public Health guidance if anyone has a fever.

3. Refrain from attending/participating in Soccer Shots sessions until everyone within the household is without symptoms for 14 days, in accordance with CDC & Public Health guidance.

WHAT IF MY COACH ISN'T FEELING WELL?

The policies we've implemented for our coaches help us ensure that coaches who are not feeling well do not step foot on Soccer Island.

WHAT IF MY COACH HAS A CONFIRMED CASE OF CORONAVIRUS?

At the first sign of illness, Soccer Shots coaches are encouraged to self-quarantine and stay off of Soccer Island (see above). Should we be made aware that a coach was tested and has a confirmed case of Coronavirus, we will have the coach contact local health authorities.

We will then follow the current recommendations from the CDC and local health authorities.

WHAT IF I, A MEMBER OF MY HOUSEHOLD, OR MY CHILD CONTRACTS CORONAVIRUS?

If any member of your household has been exposed, is exhibiting symptoms or has a confirmed case of Coronavirus, you should contact the local health authorities as recommended.

As noted above, we ask that children who are, or have household members who are, exhibiting symptoms, have been exposed to, or have confirmed cases of Coronavirus to remain off Soccer Island until everyone in the household is symptom free for 14 days, according to the CDC and/or local health authorities guidance.

Please know that we take your privacy very seriously, and therefore, do not share any private information regarding the health status of Soccer Shots participants and their families.

WILL I BE NOTIFIED IF A CHILD IN MY CLASS CONTRACTS CORONAVIRUS?

All information regarding the health of our participants and their families is kept completely confidential, at the highest level, to abide by HIPAA and respect the privacy of the families we serve. As a result, Soccer Shots does not directly notify families if other participants within their class have contracted the Coronavirus, or other communicable illnesses.

However, at the first sign of symptoms or upon exposure, we encourage our families to follow the guidelines issued by the CDC and/or local health authorities, and to stay away from Soccer Island until all household members are 14 days symptom free.

Should a participant test positive for Coronavirus, we will follow the direction of the CDC and local health authorities.
